

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1-82 (canceled).

83. (new) A wind power machine for the production of energy comprising:

    a pylon;

    a pylon attachment rotatably seated on the pylon;

    a rotor element mounted for rotation in the pylon attachment;

    a plurality of hydraulic pumps mounted in the pylon attachment each pump having an output selectively connected to Y an output line;

    a gear element positioned between the rotor element and the plurality of hydraulic pumps for drivingly connecting the rotor element to the plurality of hydraulic pumps;

    control means for selectively connecting the output from one or more of the plurality of hydraulic pumps to the output line as a function of the power output of the rotor element;

    a plurality of loads each having a connecting means for connecting the plurality of loads to the output line, wherein the loads are subdivided into different power ranges; and

    a monitoring unit for selectively connecting a load to the output line as a function of the output from the plurality of

pumps in the output line, wherein the monitoring unit selectively connects the plurality of loads to the output line as a function of the output from the plurality of pumps in the output line so that rotation speed of the rotor is controlled to optimize power output.

84. (new) The wind power machine as claimed in claim 83, further comprising a plurality of individual wind power machines connected to the plurality of loads.

85. (new) The wind power machine as claimed in claim 83, wherein the loads are generators.

86. (new) The wind power machine as claimed in claim 85, wherein the output line is connected to a converter for the generators wherein the converter drives the generators.

87. (new) The wind power machine as claimed in claim 83, wherein a controllable restriction element is located in the output line for braking.

88. (new) The wind power machine as claimed in claim 83, wherein at least one pressure equalization device is inserted in the output line between the hydraulic pumps and the plurality of loads.

89. (new) The wind power machine as claimed in claim 83, wherein the pylon attachment rotates on a bearing.

90. (new) A wind power machine according to claim 83, wherein a plurality of individual wind power machines ( $R_1$ ,  $R_2$ ) each having a rotor element connected to a plurality of hydraulic pumps are connectable to and drive the loads.

91. (new) A wind power machine according to claim 84, wherein a plurality of wind power machines ( $R_1$ ,  $R_2$ ) are connectable to a common supply line and a common return line, wherein a converter is connected to the loads by the common supply and return line.
